

BASÉLEC

BUILD AN ELECTRICAL CIRCUIT SAFELY

The **National Agency for Adult Professional Training (Afpaf)** is a leading organisation for adults and job seekers' professional qualification.

GOALS

Provide educational support to Afpaf trainers, responsible for training a large number of electricians in the context of the replacement of 35 million LINKY meters with ERDF ones.

The game's objective: teach the fundamentals of electrical engineering required in an electrician's career, as well as the use of a measuring instrument commonly used in the industry.

TARGETS

Any professional or technician wishing to acquire the knowledge of basic electricity rules as well as the principles of electrical hazard prevention.

OUR SOLUTION

An electrical installation game to **virtually build a complete circuit** including all the specifics of the Afpaf Electricity training curriculum.

- Various sequences with exercises
- A free editing mode
- Electrical hazard education: how to distinguish and anticipate hazard, how to protect from it
- No time limit, to encourage reflection and sharing.
