VICTORIA

VIDEO ANALYSIS FOR INVESTIGATIONS

THE PROJECT

REUs project has been approved by several French R&D and innovation agencies: Minalogic, Cap Digital, TES and Aerospace Valley.

It aims at facing the challenge of professional meetings and their time-consuming follow up. The objective is to develop new tools to improve meeting efficiency and facilitate the preparation of documents from the meeting: minutes and reports, to do list, etc...

EXPERIMENTATION

Manzalab is interested in the technologies that will emerge from REUs and will integrate them in several Virtual Reality applications. For professional meetings or for training purposes, the potential uses are growing but taking notes from the VR environment may limit the adoption of these technologies.
